

This solution helps the user/data owner to manage their document output in more structured and efficient way. Traditionally, the data owner just passes the raw data to printing site(s) either with certain encryption or in plain text format. This method of data distribution is not safe and open to unauthorized person to make copy.

SPIN Document Solution will provide a secure way to deliver the data and track all the processes during printing and delivery. The data owner will get just- in- time reporting through web access. The system also provides an user friendly form formatting to the users.
